Guidelines for protocol preparation

1. Protocol shall complement theoretical knowledge with real microscopic observations. As such it contains color diagrams of histological slides, or black and white diagrams of electronograms of EM atlas.
2. Each diagram must contain:
 - **title of slide (electronogram) and staining method** (see the list above)
 - **magnification:** 10 x 4 / 10 x 10 / 10 x 20 / 10 x 40 or total magnification: 40x / 100x / 200x / 400x,
 - **detailed description**
3. Only complete and carefully prepared protocols fulfilling above mentioned criteria are accepted.
